VISIT SUMMARY

Patient copy

PATIENT		VISIT	
Name	**Tomasz Nowak**	Visit date	Sunday, 05/10/2026
DOB	06/14/1997 (age 28)	Arrived	4:44 PM
Sex	Male	Discharged	6:08 PM
Phone	(614) 555-0186	Visit type	Walk-in
Address	2741 Indianola Ave, Apt C Columbus, OH 43202	Location	N High St, Columbus
		Provider	On-duty physician

Primary care (patient reported)	Anjali Patel, MD, Clintonville Family Medicine

Reason for visit

Palpitations. Fast, pounding heartbeat at rest that started shortly after 4:00 PM while studying. Wearable alert of 131 bpm while seated.

History

Studying for final exams. Reports about 5 hours of sleep per night for the past week. No chest pain, fainting or shortness of breath. No prior heart problems.

Caffeine: estimated about 600 mg/day (energy drinks, 3 today, plus coffee).
Medical history: none reported. **Daily medications:** none. **Allergies:** no known allergies.

Vitals

Time	Heart rate	Blood pressure	SpO2	Temperature	Resp. rate
4:51 PM (triage)	118 bpm	136/84 mmHg	99% (room air)	98.4 °F	16 /min
5:56 PM (recheck)	84 bpm				

Tests done today

ECG (12-lead), 4:58 PM

Sinus tachycardia, rate 112 bpm. Normal axis and intervals. No arrhythmia. No acute ST or T wave changes. No earlier ECG on file for comparison. Read by the on-duty physician and reviewed with the patient.

Blood tests, drawn 5:06 PM, resulted 5:39 PM

Test	Result	Reference range	Flag
Complete blood count (CBC)	Within normal limits	Each value in range	Normal
Basic metabolic panel (BMP)	Within normal limits	Each value in range	Normal
Potassium (from BMP)	4.1 mmol/L	3.5 to 5.1 mmol/L	Normal
Thyroid stimulating hormone (TSH)	1.9 mIU/L	0.45 to 4.50 mIU/L	Normal

Each value in each panel is listed under Test Results in your patient portal.

Diagnoses

ICD-10	Diagnosis	Type
R00.2	**Palpitations**	Primary
R00.0	Sinus tachycardia	Secondary
Z72.820	Sleep deprivation	Secondary

Assessment

Palpitations with sinus tachycardia, consistent with high caffeine intake and sleep deprivation. ECG shows no arrhythmia, and CBC, BMP and TSH are normal. Heart rate 84 at discharge. No medications given in clinic and no new prescriptions. Discharged home in stable condition.

Plan

1. Stop energy drinks. Keep total caffeine low; coffee, tea, soda and pre-workout products also count.
2. Make sleep a priority, 7 or more hours per night.
3. Drink water and eat regular meals.
4. Follow up with your primary care provider in 1 to 2 weeks. Bring this summary to that visit.
5. **Go to the emergency department for chest pain, fainting, trouble breathing, or palpitations that do not stop.** Call 911 if symptoms are severe.

About caffeine

Most healthy adults should keep caffeine at or below 400 mg a day. Your estimated intake was about 600 mg a day. One energy drink can contain 80 to 300 mg of caffeine, and an 8 oz cup of brewed coffee has about 80 to 100 mg. Headaches or tiredness after you stop usually ease within a few days to a week.

Follow-up

With	When	Phone
Anjali Patel, MD, primary care Clintonville Family Medicine	In 1 to 2 weeks	(614) 555-0177

To have the full ECG tracing or this summary sent to another office, sign a records release at our front desk or call (614) 555-0102.
