AFTER VISIT SUMMARY

Office visit with Anjali Patel, MD
Tuesday, 05/19/2026, 4:15 PM

Patient: **Tomasz Nowak**	Visit date: **Tuesday, 05/19/2026, 4:15 PM**
Date of birth: **06/14/1997 (28 years)**	Provider: **Anjali Patel, MD**
Sex: **Male**	Visit type: **Follow-up, office visit**
Phone on file: **(614) 555-0186**	Location: **Clintonville Family Medicine, Columbus, OH**

Instructions from Anjali Patel, MD

Tomasz, it was good to see you today. Your heart exam is normal and your heart rhythm is regular. The ECG and blood tests from urgent care were normal too, so you do not need any more heart testing. Your palpitations on 05/10 came from a lot of caffeine on top of short sleep during finals. Keep the energy drinks out, keep coffee to 1 to 2 cups a day, and protect your sleep, especially around exams. If the pounding heartbeat comes back, call us so we can see you.

Reason for visit

Follow-up after Northside Urgent Care visit on 05/10/2026 for palpitations.

What we discussed

- No palpitations since 05/10.
- You stopped energy drinks on 05/10 and have had none since.
- Final exams ended 05/13 and your sleep is improving.
- No chest pain, fainting or shortness of breath.

Today's vitals

Blood pressure **118/74 mmHg**	Pulse **62 bpm**	Temperature **98.2 °F (oral)**	Respirations **14 per minute**
Oxygen saturation **99% (room air)**	Height **5' 11"**	Weight **172 lb**	BMI **23.99 kg/m²**

Exam

Well appearing and in no distress. Heart: regular rate and rhythm, no murmur. Lungs: clear on both sides. Thyroid: normal size, no nodules. Legs: no swelling. Normal exam.

Assessment

Palpitations, resolved. Related to high caffeine intake (about 600 mg a day from energy drinks and coffee) and short sleep during final exams. The urgent care ECG showed a fast but normal rhythm (sinus tachycardia), with no arrhythmia.

Plan

1. No further testing needed.
2. No energy drinks. Keep coffee to 1 to 2 cups a day.
3. Aim for 7 or more hours of sleep a night, including during exam weeks.
4. Call us if palpitations come back.
5. Follow-up: as needed.

When to get help

Call 911 for chest pain, fainting or trouble breathing. **Call us at (614) 555-0177** if a fast or pounding heartbeat comes back or does not settle with rest.

This summary contains private health information. Keep it in a safe place.

Outside records reviewed

- Northside Urgent Care visit summary, 05/10/2026 (printed copy you brought today).
- Your phone photo of the 05/10 ECG printout: sinus tachycardia, 112 bpm, no arrhythmia. The full tracing was not needed.
- Labs from 05/10/2026: CBC, BMP and TSH all within normal limits.

Your medications

You are not taking any medications. Tell us before you start a new medicine or supplement.

Allergies

No known allergies.

Learning about palpitations, caffeine and sleep

Palpitations are the feeling that your heart is pounding, racing or fluttering. They are common and usually harmless. Caffeine, nicotine, stress, dehydration and too little sleep can all bring them on.

Drink	Typical caffeine
Brewed coffee, 8 oz cup	80 to 100 mg
Energy drink, 16 oz can	150 to 300 mg
Black or green tea, 8 oz cup	30 to 50 mg
Cola, 12 oz can	30 to 40 mg

For most healthy adults, up to 400 mg of caffeine a day is the usual upper limit. After palpitations, less is better.

- Stop caffeine at least 6 hours before bedtime.
- Go to bed and get up at about the same times each day.
- Drink water through the day and do not skip meals.
- Exercise is fine. If your heart races and does not slow down with rest, stop and call us.

Questions?

Call (614) 555-0177 or send a message through the patient portal. In an emergency, call 911.
