BENCH REPORT

Service and function test

SKU	UNIT	BENCH DATE	TECHNICIAN
CAW-1086	Kenwood KR-4070 receiver	2026-08-11	Kofi Mensah

INCOMING CONDITION

Brought up slowly on the dim-bulb tester. No shorts, normal idle draw, both channels playing. Dial and meter lamps out. Volume, balance and tone pots scratchy; input selector and speaker switches intermittent.

WORK PERFORMED

1. Dial and meter lamps replaced with new 8 V 50 mA wedge lamps (shop stock DL-8V50).
2. Pots and switches cleaned and worked through: volume, balance, bass and treble pots; input selector, tape monitor, loudness and speaker switches.
3. Bias set on both channels to the service manual value, rechecked after a 1 hour warm-up.
4. DC offset confirmed under 10 mV on both channels (readings below).
5. FM aligned on the signal generator: IF and stereo decoder adjusted.

MEASUREMENTS *(8 ohm resistive dummy load, 1 kHz sine, both channels driven)*

Test	Method	Left	Right	Target	Result
Output power	1 kHz, 17.9 V RMS into 8 ohms	40 W	40 W	40 W/ch into 8 ohms	Pass
THD	1 kHz at 40 W/ch	0.06%	0.07%	under 0.1%	Pass
DC offset	speaker terminals, after warm-up	6 mV	8 mV	under 10 mV	Pass

FUNCTIONAL CHECKS

Check	Notes	Result
FM tuner	Aligned. Stereo lock solid, stereo lamp on WDET 101.9.	OK
AM tuner	Clean reception on WJR 760, no hum or whistle.	OK
Phono	Stage quiet. No hum or hiss with the volume well up.	OK
Aux and tape monitor	Both clean, left and right.	OK
Bass, treble, balance, loudness	Smooth over the full travel, no crackle.	OK
Speaker selector, headphone jack	Both speaker pairs and phones switch cleanly.	OK
Dial and meter lamps	All lit, even across the dial.	OK
Signal and tuning meters	Needles respond and track tuning.	OK
Burn-in	2 hours at 1/3 power into the dummy load, no faults.	OK

RESULT

Signed off: Kofi Mensah, bench tech, 2026-08-11

PASS. All functions to spec.

Cosmetic grade is set from the master photos against Grading Guide v3. Ready for master photos.
